

Week_2 (08-June to 13-June)

Weekly Activity :

1. Look into an issue for configuring fossdash to work on both Docker containers as well as in source code.
2. The issue is here https://github.com/darshank15/GSoC_2020_FOSSOlogy/issues/2
3. Look into Makefile for configuration
4. Changed the code in ***common-sysconfig.php*** to get an input box in UI to configure FossDash URL and store it into the database table *sysconfig* .
5. Wrote script ***update_config.py*** which will trigger to read updated data from the database and modify *fossdash.conf* file.
6. I also started working on code to include VERSION info into the influx DB.
7. The issue is here: https://github.com/darshank15/GSoC_2020_FOSSOlogy/issues/3
8. Currently fetched all versions and build info from the VERSION file. But later on, we can get this data from the database table.
